### Preface

Thank you for buying the "AQUOS PHONE SERIE mini SHL24" (simply called the "SHL24" or the "product" from here on).

Before using the product, be sure to read the "Basic Manual" (this manual) and Notes on Usage"/"Setting Guide" available on the au homepage to ensure correct use. After you have finished reading the manuals, be sure to keep then sible and store the printed manuals ("取扱説明書" (Basic Manual), "ご利 用にあたっての注意事項" (Notes on Usage) and "設定ガイド" (Setting Guide)) Accessories) in safe places so that you can refer to them whenever you need them. If you lose the printed manuals (Accessories), contact an au shop or

## Operating Instructions

### ■ "Basic Manual" and "Setting Guide"

The "Basic Manual" (this manual) and "Setting Guide" available on the au homepage describe basic operations of major functions. For detailed descriptions of various functions, refer to the "Instruction Manual application" (Japanese version) that can be used on the product or "Full struction Manual" (Japanese) available on the au homepage http://www.au.kddi.com/english/support/manual/

### ■ "Instruction Manual Application" (Japanese/English Version)

You can use the "Instruction Manual application" (Japanese version) on the product to check detailed operational procedures.

Also, you can activate intended functions from an explanation screen

depending on the functions. On the home screen, tap [アプリ] (APPS) ightarrow [取扱説明書] (Instruction Also, you can use the "Instruction Manual application" (English version) on the

product to check operational procedures.

On the home screen, tap [APPS] → [Basic Manual] after switching the display anguage to English (▶P. 15)

· To use the application for the first time, you need to download and install it by following on-screen instructions

### Safety Precautions

Before you start using the product, be sure to read the "Notes on Usage" available on the au homepage to ensure correct use Before you assume that the product is malfunctioning, check for possible emedies in the following au Customer Support site of au homepage: http://www.au.kddi.com/english/support/

## When Using the Product

- Communication is not possible even inside the service area in places where the signal does not reach (e.g. tunnels and basements). Also, communication may not be possible in poor reception areas. Communication may be interrupted if you move into a poor reception areas during
- communications. Since this product uses radio waves, the possibility of communicatio ntercepts by third parties cannot be eliminated. (Though the LTE/CDMA/
- GSM/UMTS system has highly secure confidential communication features.) The product is compatible with the international roaming service. Each
- etwork service varies depending on the area and service content. For details, refer to "auのネットワークサービス·海外利用" (au Network Services/International Roaming) described in "Instruction Manual application" (Japanese) or "Full Instruction Manual" (Japanese) available on
- Since the product is a radio station under the Radio Law, you may be asked to temporarily submit the product for inspection in accordance with the Radio
- The IMEI information of your cell phone is automatically sent to KDDI CORPORATION for maintenance and monitoring operational status of your
- Since the battery is built into the product, you cannot replace it yourself. For
- replacing the battery, contact an au shop or Customer Service Center. • Take care not to inconvenience people around you when you use the product

Before attaching the au Nano IC Card (LTE), turn the product off and remove

Attaching the au Nano IC Card (LTE)

Open the au Nano IC Card (LTE)/microSD memory card

2 Slowly pull the au Nano IC Card (LTE) tray straight out by nooking a finger on it.

### Put the au Nano IC Card (LTE) on the au Nano IC Card (LTE) tray.

Make sure the notches on the au Nano IC Card (LTE) and au Nano IC Card (LTE) tray face the proper orientation and put the card slowly on the

4 Slowly insert the au Nano IC Card (LTE) tray into the au Nano IC Card (LTE) tray slot, taking care not to let the tray be caught on the metal parts on both sides of the slot.

Confirm the position of the au Nano IC Card (LTE) tray slot and the prientation of the au Nano IC Card (LTE) tray carefully, and insert the tray all the way into the slot in the direction of the arrow. Inserting the tray forcibly may damage the tray.

## Close the au Nano IC Card (LTE)/microSD memory card

O Inserting the au Nano IC Card (LTE) tray not deeply enough may prevent the product from functioning properly.

© Take care not to lose or damage the removed au Nano IC Card (LTE)

. If you are using the product overseas, check the relevant laws and regulations of the country/region you visit.

· When the product is used by a child, parents or quardians should thoroughly read the "Basic Manual" (this manual) or "Notes on Usage"/"Setting Guide"/ "Full Instruction Manual" (Japanese) available on the au homepage and teach the child how to use it.

## Cell Phone Etiquette

Use of cell phones is not allowed in the following

• Do not use a cell phone while driving a car or riding a motorbike or bicycle. It may cause a traffic accident. Use of a cell phone while driving a car or torbike is prohibited by law. Use of a cell phone while riding a bicycle may be punishable by some regulations. · Be sure to turn off the product while you are aboard an airplane. Otherwise,

safety of your flight may be compromised.

## List of Packaged Items

Before you start using the product, make sure that you have all the following packaged items with the product

- 取扱説明書 (Basic Manual) (Japanese)
- ご利用にあたっての注意事項 (Notes on Usage) (Japanese) ・設定ガイド (Setting Guide) (Japanese)
- The following items are not included in the package.
- microSD memory card
- Earphone microUSB cable
- · Purchase a specified charger (sold separately)
- look different from the actual product.

The battery is built into the product.

### Using au Disaster Countermeasure Application

au Disaster Countermeasure is an application in which you can use Disaster Message Board, Emergency Rapid Mail (Earthquake Early Warning, Disaster and Evacuation Information, and Tsunami Warning), Disaster Voice Messaging Service and Disaster Information/Donation website

## III On the home screen, [APPS] → [au災害対策] (au Disaster

The au Disaster Countermeasure menu is displayed

■ Using Disaster Message Board Disaster Message Board is a service to enable customers in disaster areas to register their safety information via LTE NET when large-scale disasters, such as an earthquake whose Japan seismic scale is approximately 6-lower or more, occur. The registered safety information can be checked by customers using au phones, and also from other carriers' cell phones, PCs, etc.

For details, refer to "Disaster Message Board Service" on the au homepage ■ From the au Disaster Countermeasure menu, [災害用伝言 板] (Disaster Message Board).

Follow the on-screen instructions for registration/confirmatio

# Earthquake Early Warning

 Earthquake Early Warning notifies areas where a strong shaking (Japan seismic scale 4 or more) is expected when an earthquake whose maximum Japan seismic scale is predicted of 5-lower or more has been This service detects an earthquake (P-wave, preliminary tremors) near

the seismic center immediately after the earthquake occurs and automatically calculates its location, scale and predicted strength of the shaking. After that, you will be notified of the earthquake as soon as possible within a few seconds to dozens of seconds before a strong shaking from the earthquake (S-wave, principal shock) occurs. In the vicinity of the seismic center, a strong shaking may reach you

before Earthquake Early Warning. The Earthquake Early Warning distribution system provided by this service is different from that provided by TV, radio and other communication media and thus the arriving time of Earthquake Early Warning may be different among those media.

### Tsunami Warning

# Specific Absorption Rate (SAR) of Cell

This model [SHL24] mobile phone complies with Japanese technical regulations and international guidelines regarding exposure to radio waves This mobile phone has been designed in observance of the Japanese technical regulations regarding exposure to radio waves (\*1) and limits to exposure to radio waves recommended by equivalent international guidelines These international guidelines were set out by the International Commission on Non-Ionizing Radiation Protection (ICNIRP), which is in collaboration with the World Health Organization (WHO), and the permissible limits include a substantial safety margin designed to assure the safety of all persons, regardless of age and health condition. The Japanese technical regulations and international guidelines define the limits using a unit of measurement known as the Specific Absorption Rate (SAR), which represents the average amount of radio frequency energy absorbed by the human head. The SAR limit for mobile phones is 2.0 W/kg. The highest SAR value for this mobile phone when tested for use at the ear is 0.473 W/kg. There may be slight differences in SAR levels among individual products, but they all satisfy the limit. The actual SAR of this mobile phone while talking on the phone can be well below that indicated above. This is due to automatic changes in the power level of the mobile phone to ensure it only outputs the minimum power required to communicate with a base station. Therefore in general, the closer you are to a base station, the lower the power output of the mobile phone. This mobile phone can be used in positions other than against your ear. This mobile phone satisfies the international guidelines when used with au Carrying Case F Black (0105FCA) (sold separately)/au Carrying Case G Black (0106FCA) (sold separately) recommended by KDDI (\*2). In case you are not using the au Carrying Case F Black (0105FCA) (sold

The World Health Organization has stated that "a large number of studies have been performed over the last two decades to assess whether mobile phones pose a potential health risk. To date, no adverse health effects have been established as being caused by mobile phone use". If you would like to know more detailed information, please refer to the WHO website

Please refer to the websites listed below if you would like to know more detailed information regarding SAR

 Ministry of Internal Affairs and Communications website: http://www.tele.soumu.go.jp/e/sys/ele/index.htm ociation of Radio Industries and Businesses website

SHL24 is in compliance with the essential requirements and other relevan ons of Directive 1999/5/EC. A copy of the original declaration of conformity can be found at the ollowing Internet address http://www.sharp.co.jp/k-tai

Any AC adapter used with this handset must be suitably approved with a 5Vdc SELV output which meets limited power source requirements as specified in EN/IEC 60950-1 clause 2.5.

■ Battery - CAUTION

Use specified Charger only. Non-specified equipment use may cause malfunctions, electric shock or fire due to battery leakage, overheating or bursting.

The battery is embedded inside the product. Avoid removing the embedded battery since this may cause overheating or bursting Do not dispose of the product with ordinary refuse. Take the product to an au Shop, or follow the local disposal regulations.

To prevent possible hearing damage, do not listen at high volume

## **■** Volume Level Caution

# The maximum output voltage for the music player function, measured in accordance with EN 50332-2, is $120\,\mathrm{mV}$ .

exceed the limits for exposure to radio waves recommended by international auidelines. These guidelines were developed by the independent scientific organization ICNIRP and include safety margins designed to assure the protection of all persons, regardless of age and health.

The guidelines use a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit for mobile devices is 2 W/kg and the highest SAR value for this device when tested at the ear is 0.287 W/kg\* and when worn on the body is 0.274 W/kg\*. For body-worn operation, this mobile device has been tested and meets the RF

positioning the handset a minimum of 1.5 cm from the body. Use of other accessories may not ensure compliance with RF exposure guidelines. As SAR is measured utilizing the devices highest transmitting power the actual SAR of this device while operating is typically below that indicated above. This is due to automatic changes to the power level of the device to ensure it only uses the minimum level required to reach the network.

devices. They note that if you want to reduce your exposure then you can do so by limiting the length of calls or using a hands-free device to keep the mobile phone away from the head.
